

# TUBE STRIPPER

Krew Instrument's Tube Stripper is a highly useful tool designed for easy and efficient stripping of blood bag tubes during blood collection and processing procedures. This device allows for the cutting off of blood in tubing segments, which is then collected in separate bags for further processing. The tube stripper facilitates the correct mixing of blood in the tube with the contents of the blood bag, ensuring proper anticoagulation of blood in the tubing before segmentation. Its easy-to-use design streamlines the blood preparation process, making it an invaluable tool for medical professionals.

## SPECIAL FEATURES

- Facilitates easy and efficient stripping of blood bag tubes for blood collection and processing procedures.
- Allows for the separation of blood in tubing segments, which is then collected in separate bags for further processing.
- Helps to ensure proper mixing of blood in the tube with the contents of the blood bag, promoting proper anticoagulation of blood in the tubing before segmentation.
- Streamlines the blood preparation process, saving time and effort for medical professionals.
- Durable and built to last, providing reliable performance over an extended period of use.
- User-friendly design for ease of use and convenience.
- Made of high-quality materials to ensure long-lasting performance and durability.
- Compact and portable for easy storage and transportation.
